

# CWL Safety System

WBM, Wire By Meter

WHAT'S NEW!

**We extend the CWL Safety system with a completely new concept – WBM!**

**WBM is a wire solution equipped with a completely new and creative wire lock that facilitates and increases flexibility in your installation and handling.**

Wire is sold by the metre and cut locally by the installer or retailer.

The wire ends are fixed with our innovative wire lock.

Offered in lengths of 20, 50, 100 and 500 m, supplied on a roll. The WBM system is developed with a softer 133-strand cable.

The system is tested and approved of RISE for use by 2 people simultaneously, according to the harmonised European standard CE EN 516 class 2.

**"We explore our horizons and reach new heights"**

## **CWL Safety System PRO**

**are available for all our existing installation types**

The PRO system allows you to work safely on the roof with the best ergonomics and efficiency. With the wire runner that climbs over the wire guides and corners, you always move the shortest way without any extra handling.

## **CWL Safety System LIGHT**

**we have added a wire guide for installation on flat roofs!**

The LIGHT system is a simpler version of the wire system where you can move along the wire system with a simple hand movement. This variant is suitable for movements on straight sections and low-slope roofs, as well as for occasional work on the roof.

# CWL Safety System

## WBM, Wire By Meter

**The WBM system is both easier and more cost-effective to manage because you customise the product directly to your needs!**

The WBM is used in combination with our existing fixings.

Together with the optional "Add-on kit for wire fixing WBM" and "Wire corner WBM", your Safety System becomes a complete solution!
